# What is DeroGold?

The DeroGold Association is the future of crypto today and we welcome you aboard. Our coin utilizes new technology thanks to the features that are being implemented in TurtleCoin. We have the algorithm CN-TURTLE which increases our hashrates enormously while staying Asic resistant. Lite-blocks are employed which reduces our blockchain size by approximately 95% in comparison to if we had not used the new lite-blocks technology. DEGO aims to be one of the most widely used cryptocurrencies for transacting. Please join us at our discord <http://derogold.gq> !

## SPECIFICATIONS OF DEGO

|                                      |                       |
|--------------------------------------|-----------------------|
| DIFFICULTY TARGET                    | = 10; // seconds      |
| EMISSION SPEED FACTOR                | = 23;                 |
| MONEY SUPPLY (in atomic units)       | = 1000000000000000000 |
| CRYPTONOTE PUBLIC ADDRESS PREFIX     | = dg                  |
| CRYPTONOTE DISPLAY DECIMAL POINT     | = 2;                  |
| CRYPTONOTE MINED MONEY UNLOCK WINDOW | = 120;                |
| DEFAULT MIXIN V0                     | = 3;                  |
| PORTS = 42069 and 6969               |                       |
| TICKER = DEGO                        |                       |

## ROADMAP

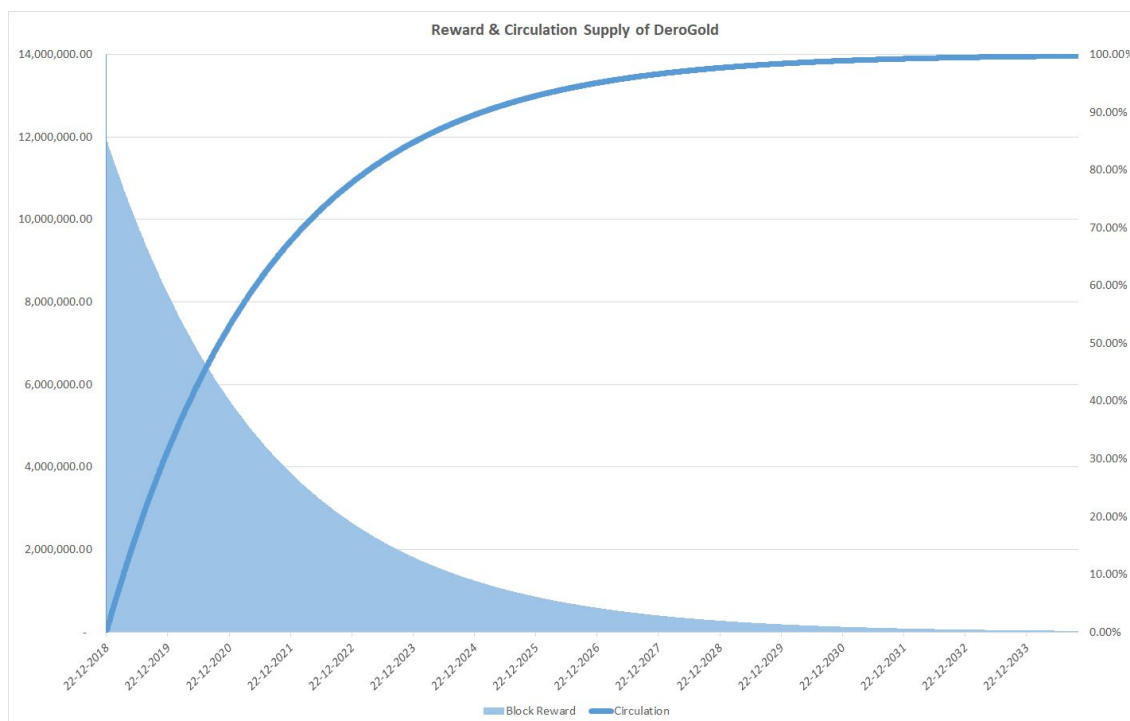

Year 1: We plan to have DeroGold spread to the masses through proof of work, word of mouth, online exchanges, and by giving the coins away to our friends and discord members as gifts. A premine of 0, we will be doing all giveaways thanks to generous DeroGold Association community members.

Year 2: We will implement DeroGold into payment systems for major vendors as a way for people to buy their consumer goods online as well as buying in physical stores with their mobile devices.

Year 3: We will have major nation-states accept DeroGold as their main currency so that all the country's/micro-nation's transactions are done with DEGO.

Year 4 and beyond: We plan to continue the proliferation of the DeroGold system to the rest of the world until DEGO is the most ubiquitous cryptocurrency used by everyone on Earth and other planets like Mars (including any other planets that we may Terra-form after that).

# Why DeroGold?

|             |                                    |                  |
|-------------|------------------------------------|------------------|
| TRTL        | 100,000,000,000,000                | Shells           |
| BTC         | 2,100,000,000,000,000              | Satoshis         |
| IOTA        | 2,779,530,283,277,761              | IOTA             |
| <b>DEGO</b> | <b>10,000,000,000,000,000</b>      | <b>Degotoshi</b> |
| ETH         | 97,879,990,190,000,000,000,000,000 | Wei              |

DEGO was designed entirely for mass adoption, having only 2 decimals makes the coins intuitive like physical dollars as they are only divided down to 1/100th of a coin and not 1/100,000,000 like BTC. DEGO unlike BTC can be mined by the average person using a computer or similar device making it much more accessible. By upcycling old computer parts to mine, we are reducing the amount of waste going to landfills.

# How to achieve the goals of the roadmap?

1. Year 1: The best thing we can do is tell as many people as possible about DeroGold.

Without name recognition it will be hard to gain traction. The more people that know about DEGO, the more relevant DEGO becomes to the cryptosphere in general. One of the best things you can do personally, is to hand out paper wallets to your friends and loved ones as gifts. Get them interested in cryptocurrency and teach them about it at the same time.

2. Year 2: By now DeroGold should have gained a decent amount of recognition, we need the big names in crypto to take notice and apply DEGO to their own services, on sites such as coinpayments.net for example. With a low transaction fee and quick transaction time, DeroGold should make itself appeal to people and be presented as a viable alternative to existent payment gateways. Furthermore, using DeroGold to transact would serve as a means to protect people from the greed of credit card companies and fractional reserve banking.

3. Year 3: This will be the phase where DeroGold becomes the official currency of our micronation comprised of floating islands constructed by people around the world. We want teach people how to be able to seastead and use DeroGold. We also want to get other countries on board when inevitably these banking crises happen. This should lead to mass adoption of cryptocurrency worldwide as integral to a person's lifestyle. Cryptocurrency will present itself as a better option than fiat.

4. Year 4 and beyond: Obviously the most lofty part of the roadmap, this stage will rely on the success DEGO achieves as a currency used globally and depends upon the advancements in technology favoring the use of cryptocurrency and deep space exploration. This also includes having our ideas of permaculture and homesteading heading to planets other than Earth.

## What's the process for forming an island?

Many different components go into our process for forming an island. First of all, we want our islands to be sustainable. To achieve this, it will have to be a floating island made from recycled materials such as plastic, metal, styrofoam, wood, and anything else that is repurposable. Permaculture designs will be incorporated, along with aquaculture and subsistence farming. The main intention of DEGO being global means that we teach you how to recreate our formulated process for constructing your own floating islands. Seeing as how DeroGold members are already located all over the world this signifies to us that our building design and permaculture design will have to vary and adapt as the different climate zones require different flora and fauna and structural requirements.

The more people we have constructing islands with us the more we can improve the process and the stronger our network of influence becomes. The actual process we plan to adhere to isn't the most complicated but definitely requires lots of planning for suitable habitats. The cost of transporting supplies must be considered as well as the labor costs. At first glance, the process will likely be involved by only the most committed community members as it will be literally embarking out into the middle of the ocean for months or years at a time building and maintaining an island and working to expand it.

“We believe the first key step is for seasteading to become not just possible, but sustainable – technologically, legally, and financially.” -

<https://www.seasteading.org/about/vision-strategy/>

# How to help the cause?

We need all the help we can get from as many professionals as possible to make this dream a reality. We need a collaborative and proactive effort starting today when it comes to realizing the potential of DEGO. As such, there are a plethora of ways for you to contribute to our cause. Big or small, every little bit of collaboration counts.

- Invite your friends and family to our discord chatroom <http://derogold.gg> allowing them to experience the virtual world of DeroGold.
- Another way to help is via translating this whitepaper to your native language. By translating the whitepaper to your native language you're helping spread the DEGO message and allowing more people to join in! :)
- If you are a social media buff, you can post tweets, share DEGO's message on various platforms, make videos, etc. Don't forget to include #DEGO or #DeroGold when doing so.
- Other things like attending crypto conferences as a steward for DEGO and networking with other people in our environment is important as we build the bridges to bigger and better things.
- DeroGold is always on the lookout for more promoters to market the coin to new demographics, so that DeroGold is noticed by people around the world. We want to enable as many people as possible to break the chains imposed by the daily grind, the corporate ruling class, big bankers and so forth.

- We necessitate the recruitment of engineers, botanists, farmers, architects, sailors, and other members in specialized careers to assist in construction of the islands. We also need general labor to be done as a lot of the work in setting up an island requires manual labor and working together in coordination. Other ways to help with this are by having seafaring vessels that can transport people to an island's location, supplying us recycled materials to build with, and by donating towards the inevitable costs of island production such as the costs associated with executing construction tasks and the start up costs for farming and livestock.
- We need to teach people as much as possible about DeroGold and its message and well-meaning intentions. If you can film or write, we need your help towards going viral. Youtube is a good platform to post interviews, documentaries, hype videos, and even live streams. If you are a blogger please consider writing up your feelings on DEGO and posting that or even writing up some guides on DEGO as that would be greatly appreciated.
- DeroGold is always in search of more programmers and coders to join our team! We need devs from all walks of life to join up, and help us create wonderful things for all OSes. Some things we are currently in process of working towards are mobile miners and wallets, payment systems, faucets, gui miner, and even implementation into video games!
- Interested in one day moving to a seastead? Take the Floating City Survey conducted by The Seasteading Institute here:
